

CONNX for Oracle

The CONNX Oracle module provides secure, real-time, read/write, SQL access to Oracle databases running on any platform, with connectivity through TCP/IP.

CONNX for Oracle optimizes performance by analyzing SQL statements to determine if they can be directly passed to the target database. Support is available for the invocation of compiled Oracle stored procedures and functions within Oracle packages. Oracle RDBMS is supported on all platforms, version 7.3 and above. CONNX for Oracle uses SQLNet 2.x and above. CONNX also supports Oracle heterogeneous services.

Compliance

ODBC Level 2 Compliant.
ODBC 3.51 Driver.
JDBC Type 3 Driver
OLE DB 2.5 Driver
.NET 1.1 Driver

Join Oracle with Multiple Data Sources

In conjunction with other products in the CONNX suite, you can perform seamless joins between two or more supported disparate databases using ODBC, OLE DB, .NET and JDBC. CONNX for Oracle access is fast and efficient. With CONNX, a single metadata model can be created that spans all enterprise data sources and applications requiring data access. The result is an enterprise-wide view of data that provides a reusable standards-based framework for information access. To the user or application, data appears as if it existed in a single federated relational database.

Federated Joins

The federated join capabilities of CONNX treat multiple Oracle databases as one relational database.

Views

CONNX supports the creation of views, which facilitate hiding table relationships from the end user. CONNX Views facilitate the creation of heterogeneous joins between multiple disparate databases.

SQL and CONNX for Oracle

CONNX supports ANSI SQL (Insert, Update, Select, and Delete); group by, distinct, aggregate (AVG, MIN, MAX, SUM, and COUNT), and all substring, string, date, conversion, and math functions. Nested inner and outer left/right joins are supported, as well as subqueries and correlated subqueries. CONNX also supports Unions and Insert/Select.

Data Conversions

CONNX supports over 400 data types, including BLOBs and CLOBs, and performs bi-directional data conversions for data updates and retrieves.

Stored Procedure Execution

CONNX provides a mechanism that allows remote execution of stored procedures contained in the target databases.

Popular Program Access

As with all databases supported by CONNX, CONNX for Oracle has been tested with Microsoft Access, Microsoft Excel, Microsoft Visual Studio, including Visual Basic/C++, etc., Delphi, PowerBuilder, Impromptu, ReportNET, Lotus Approach, Crystal Reports, and vendors, such as Cognos and Business Objects. CONNX for Oracle also supports ADO and ASP.NET (Active Server Pages) and JDBC is used with Websphere and Apache Tomcat.

Security Preserved and Extended

The CONNX CDD provides additional field and table-level encryptable security by group or user, ensuring the security of sensitive information. CONNX also supports row level security with CONNX Views. Additionally, the CONNX Data Dictionary is encrypted to secure sensitive information.

Table Redefinition

The CONNX Data Dictionary supports multiple record layouts of the same Oracle file, based on a "record type" field.

Record Definition Imports

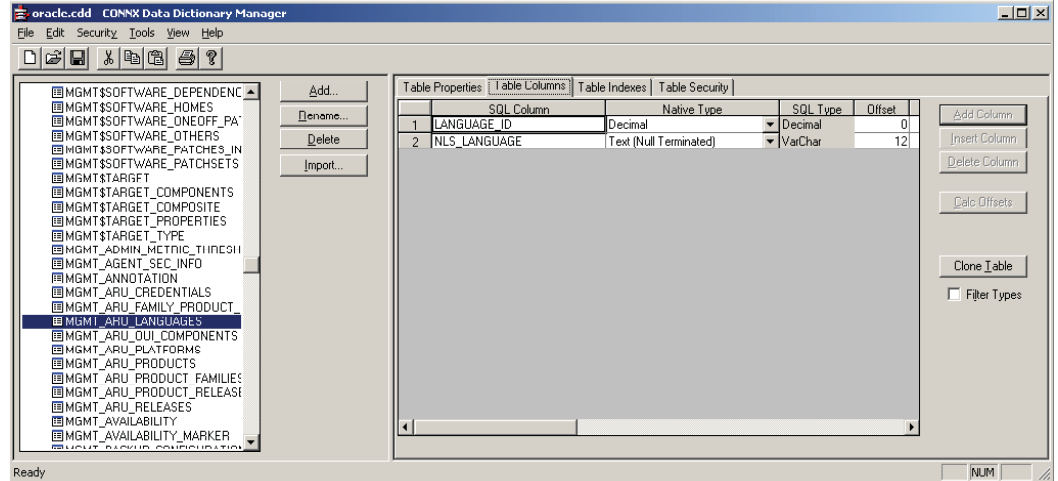

CONNX imports table definitions directly from Oracle Databases.

CONNX for Oracle

Features	Benefits
<ul style="list-style-type: none"> ▶ Federate with other relational, non-relational, networked, hierarchical, object, and flat-file database information through a single, easy-to-use, SQL-based interface. ▶ Data at your fingertips – anything from legacy data to recently added content to application information – anytime, anywhere. ▶ A reusable standards-based framework for information access that drastically lowers the short- and long-term costs usually associated with complex enterprise data solutions. 	<ul style="list-style-type: none"> ▶ Boosts productivity and efficiency of end users and application builders by connecting different functions within the enterprise. ▶ Shortens development time on projects using open standards. ▶ Improves time to market. ▶ Provides cost-effectiveness. ▶ Preserves initial investment.
<ul style="list-style-type: none"> ▶ Access from Microsoft Windows, Unix and Linux productivity tools, database applications, and development environments (VB.NET, C# and JDBC) that are used with Websphere, Apache Tomcat. 	<ul style="list-style-type: none"> ▶ Enhances flexibility.
<ul style="list-style-type: none"> ▶ Proven scalability, supporting any number of client machines. ▶ Compatible with any .NET- ODBC-, OLE DB-, or JDBC-compliant application. 	<ul style="list-style-type: none"> ▶ Enables use of open standards interfaces with investment protection. ▶ Minimizes resource utilization. ▶ Utilizes current infrastructures with no additional cost.
<ul style="list-style-type: none"> ▶ Open-platform technology that integrates with existing systems so you can manage them with ease. 	<ul style="list-style-type: none"> ▶ Extends the functionality and life of existing architecture. ▶ Preserves investments.
<ul style="list-style-type: none"> ▶ Windows, Unix and Linux client support. 	<ul style="list-style-type: none"> ▶ Supports existing IT infrastructure at no additional cost. ▶ Eliminates staff re-training.
<ul style="list-style-type: none"> ▶ Field and record level protection. ▶ Thread-safe support for multi-threaded applications. 	<ul style="list-style-type: none"> ▶ Provides maximum levels of data security.
<ul style="list-style-type: none"> ▶ Heterogeneous joins for the creation of reports that consolidate data spanning multiple data sources. 	<ul style="list-style-type: none"> ▶ Maintains integrity of data.
<ul style="list-style-type: none"> ▶ Real-time read/write access to Oracle data. 	<ul style="list-style-type: none"> ▶ Enhances flexibility.
<ul style="list-style-type: none"> ▶ Multiple views support. ▶ Extensive data type conversion support. ▶ Flexible data format and storage. 	<ul style="list-style-type: none"> ▶ Minimizes complexity for end users.
<ul style="list-style-type: none"> ▶ Comes bundled with the CONNX InfoNaut querying and reporting tool that enables users to instantly view their data. 	<ul style="list-style-type: none"> ▶ Easy to install and use.
