

# What's New...

# CONNX12

## What you need to know.

**You are receiving media to upgrade your CONNX software to the latest version, CONNX 12. Before you install, please note that there are some enhancements to the licensing model beginning with CONNX 12.**

- ◆ CONNX 12 license keys will now have an embedded version number. This is a departure from the past, so your old license keys will no longer work with version 12 licenses and above.
- ◆ CONNX will perform a check to confirm if an N-Tier license is required, Requirements for an N-Tier license are when CONNX is accessed via a web server or application server.
- ◆ CONNX now performs a verification of the actual server size compared to the server size noted in previous agreements or purchase orders. This model was fashioned after the licensing model of other software companies like Microsoft.
- ◆ CONNX 12 has added a "revoke" feature which will allow a user to easily move a license server/administrator from one server to another.

To ensure this is a smooth transition, we will issue CONNX 12 evaluation license which will enable you to validate the Server size (MSU/CPU/Core counts) in order for CONNX to be able to issue the proper permanent licenses for your configuration. These evaluation licenses will be valid for a 2 week period.

**When you are ready to upgrade, please contact us at [VersionUpgrade@connx.com](mailto:VersionUpgrade@connx.com) to initiate this process.**
